

Rubrik Envision: Smart Analytics for a Multi-Cloud World

Rubrik Envision unlocks fast, actionable insights across a multi-cloud environment for business intelligence at scale. Deliver analytics on data management, compliance, and capacity utilization across your entire infrastructure - on-premises, at the edge, and in the cloud. Instantly create and share rich data visualizations and customized reports to drive operational efficiencies. Build your own dashboards, enable self-service access, and create custom reporting workflows with a responsive, HTML5-based interface and an API-first architecture.

EASY TO USE

Easily search and create custom reports within a consumer-grade interface.

GRANULAR REPORTING

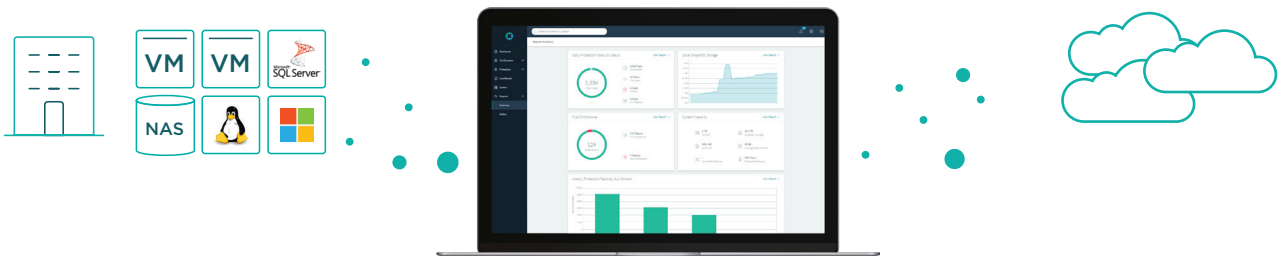

Define attributes, measures, and visual representations over specific VMs or physical hosts.

ON-DEMAND INSIGHTS

Instantly search, schedule, and download up-to-date reports.

HOW IT WORKS

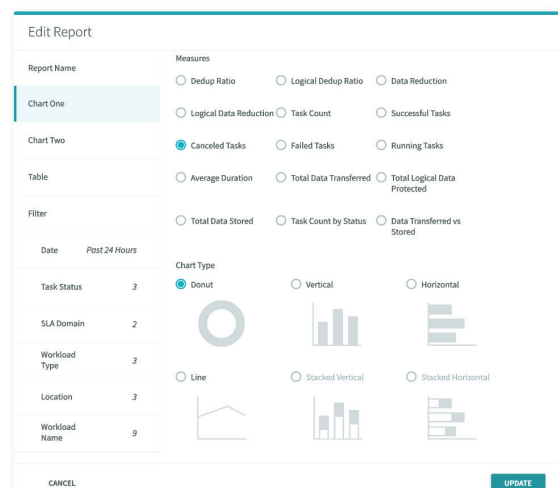

In-Depth Platform Analytics

Leverage comprehensive insights on data management, compliance, and capacity utilization across all your data whether it resides on-premises, at the edge, or in the cloud. Create, share, and access reports instantly to increase business agility, optimize operations, and plan for growth.

Self-Service Data Visualization

Envision makes relevant data accessible to any user. Deliver advanced data visualization within a consumer-grade interface. Pick from a variety of charting widgets (line, pie, bar, etc.) to represent data. For users looking to get started immediately, the system will automatically select charting widgets with its intelligent default settings.

Custom Attribute Filtering

Utilize pre-canned reports or create your own based on over 15 attributes, 40 measures, and timelines – such as protection status, compliance, system capacity, data efficiency, and more. Provide granular reporting on specific VMs, filesets, and physical hosts.

Automated On-Demand Reports

Share insights across your organization. Schedule reports to be automatically emailed in an easy-to-read HTML5 format or download up-to-date Excel reports on-demand.

MANAGEMENT SIMPLICITY

- **Unified Console:** Gain visibility across all your data through a HTML5-based and responsive interface. Generate multiple customized reports with minimal management required.
- **Cloud-scale Data Efficiency & Resiliency:** Create and save all reports into one Gallery. Use global search to easily sort and retrieve any report as the number of custom reports grow.
- **API-First Architecture:** Use a rich suite of APIs to easily pull in custom reporting to other third party services.

USE CASES

Capacity Planning & Operational Efficiency	Enhance capacity and performance to reduce cost, plan for growth, and track compliance based on SLAs and organizational goals. Easily create a daily report on task failures or a weekly summary highlighting tasks based on SLA domain.
Compliance & Audit Reporting	Quickly obtain detailed reports within a specific time period to produce records demonstrating SLA compliance.
Remote Site Monitoring & Disaster Recovery	Create and schedule regular reports to monitor remote sites. Ensure they are up-to-date in case of disaster recovery.

CUSTOMERS USE RUBRIK ENVISION TO DELIVER HIGHER PERFORMANCE

“Rubrik’s Cloud Data Management Platform provides enterprise-grade analytics and reporting with Envision. Our customers are now able to deliver on-demand platform analytics across their environment, invaluable for troubleshooting, compliance, and performance.”

Rob Mackle, Director and Co-Founder, Assured Data Protection

“Rubrik Envision has given us the ability to generate granular and customized reports to improve how we plan for budgeting, capacity, and growth. As a service provider, we track and report usage on a per-customer basis. Rubrik Envision has made this possible with just a few clicks.”

Allen Hall, Director of Cloud Engineering, RediCloud
